create, connect, educate

*Feature available on the Taurus interactive panel

AI arrives in the classroom

Hand in hand with interactive screens

Virtual Assistant

Voice Recognition

Circle&Go

Calculator Pro

Automatic Subtitles

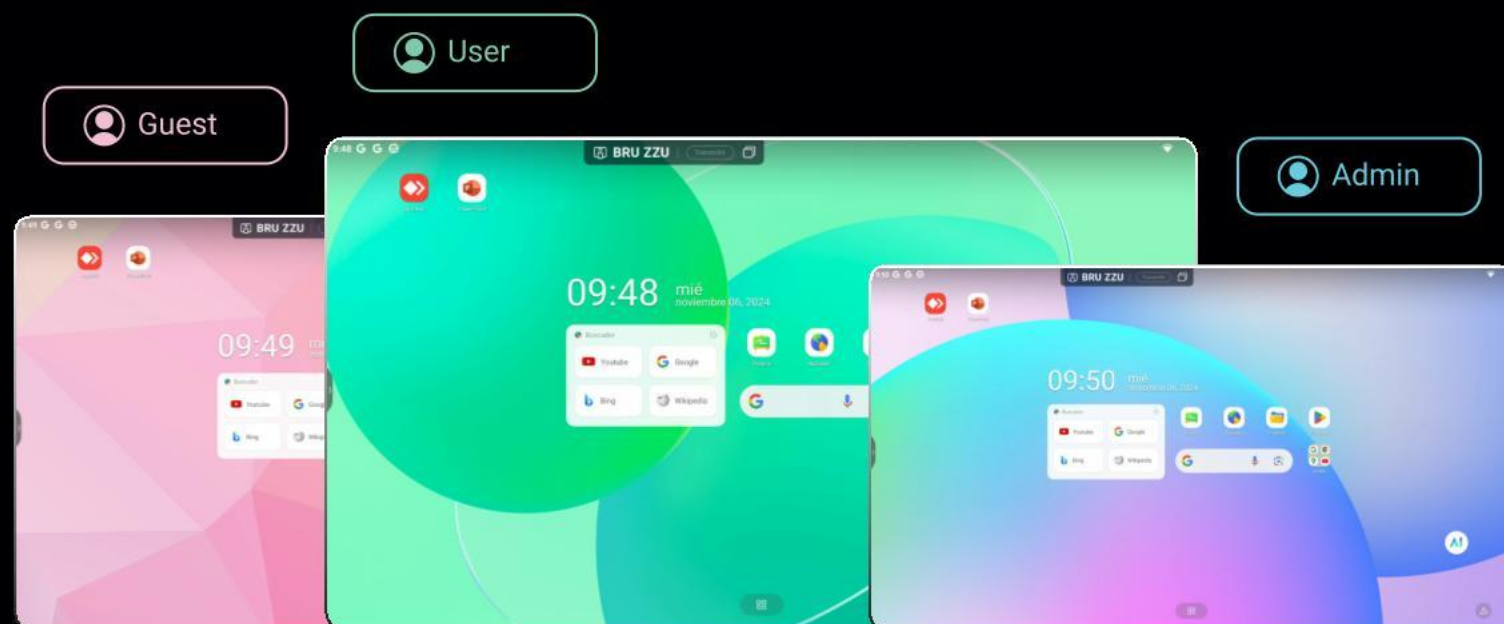

Generative AI

One school, multiple roles

Maximum security and privacy

Easily and securely control and manage the different accounts in your educational center. Define specific roles for each user type, such as administrator, user, and guest, ensuring safe and appropriate use of the platform.

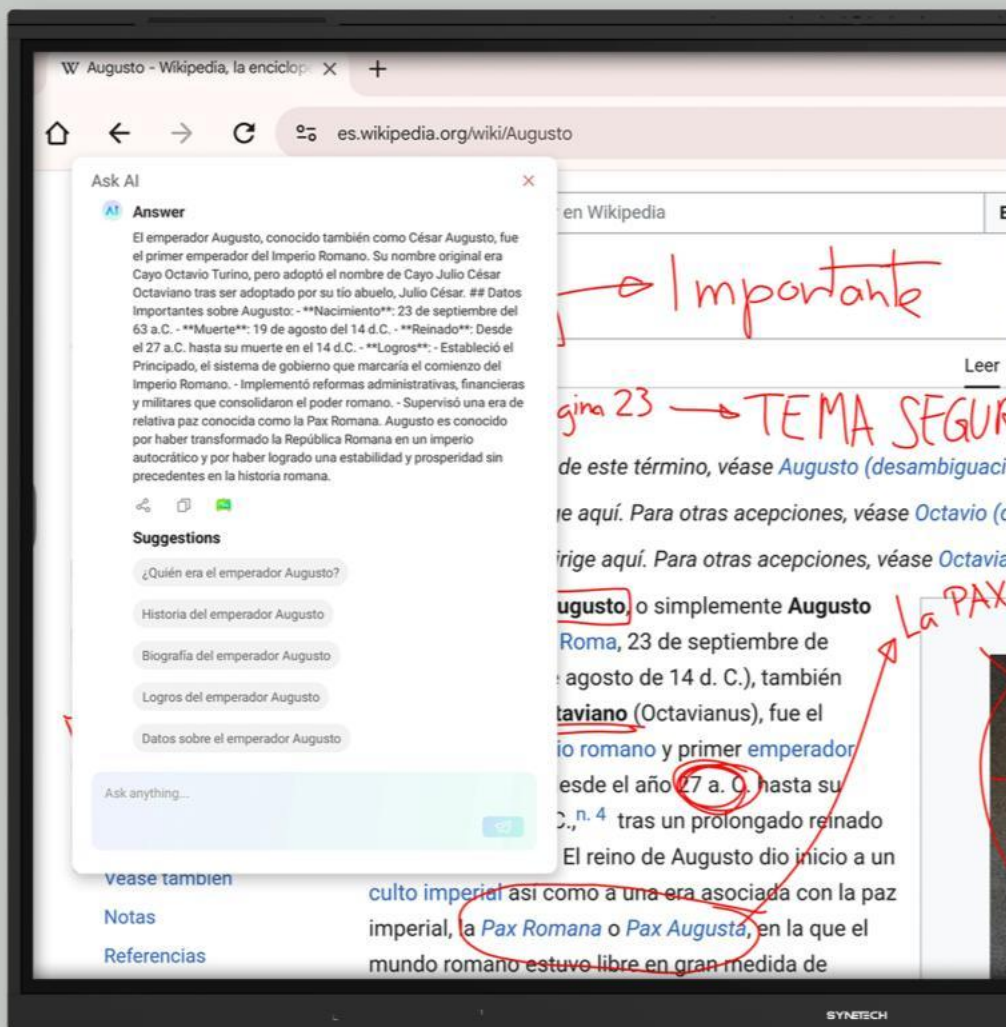

Ask the AI

Automatic Assistant

Create dynamic classes with the virtual assistant integrated into the interactive digital panel.

Students and teachers can access information in seconds, receive personalized assistance, and resolve questions instantly, enhancing classroom efficiency and fostering student autonomy.

Circle an element

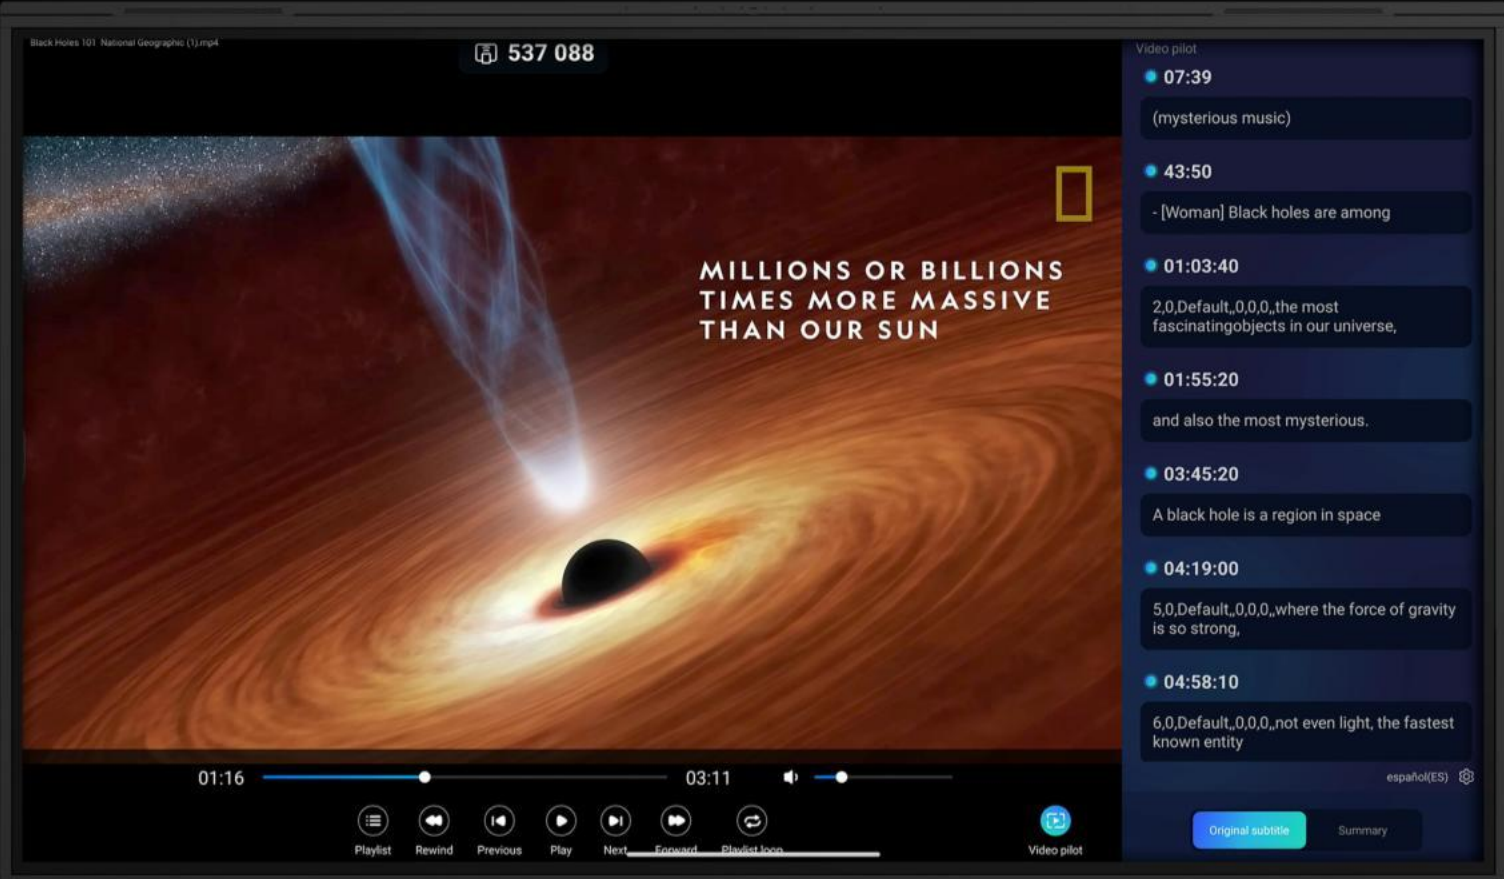

And access detailed information

Every video is a unique educational experience

Don't miss a single detail

Imagine an interactive display where, as a video plays, AI-generated subtitles automatically appear. These automatic subtitles not only support those with hearing difficulties but also enhance reading and comprehension for everyone, making learning more inclusive and effective.

Capture the main ideas of a video with the summary feature.

Real-time translation

Accessible and inclusive classrooms

Translate the audio of a video or an oral speech into the language of your choice. Thanks to artificial intelligence, this tool automatically detects the original language and translates it accurately, adapting to the context of the speech. Whether to facilitate communication in a multilingual conversation or to understand audiovisual content in another language, this technology eliminates language barriers, connecting people immediately.

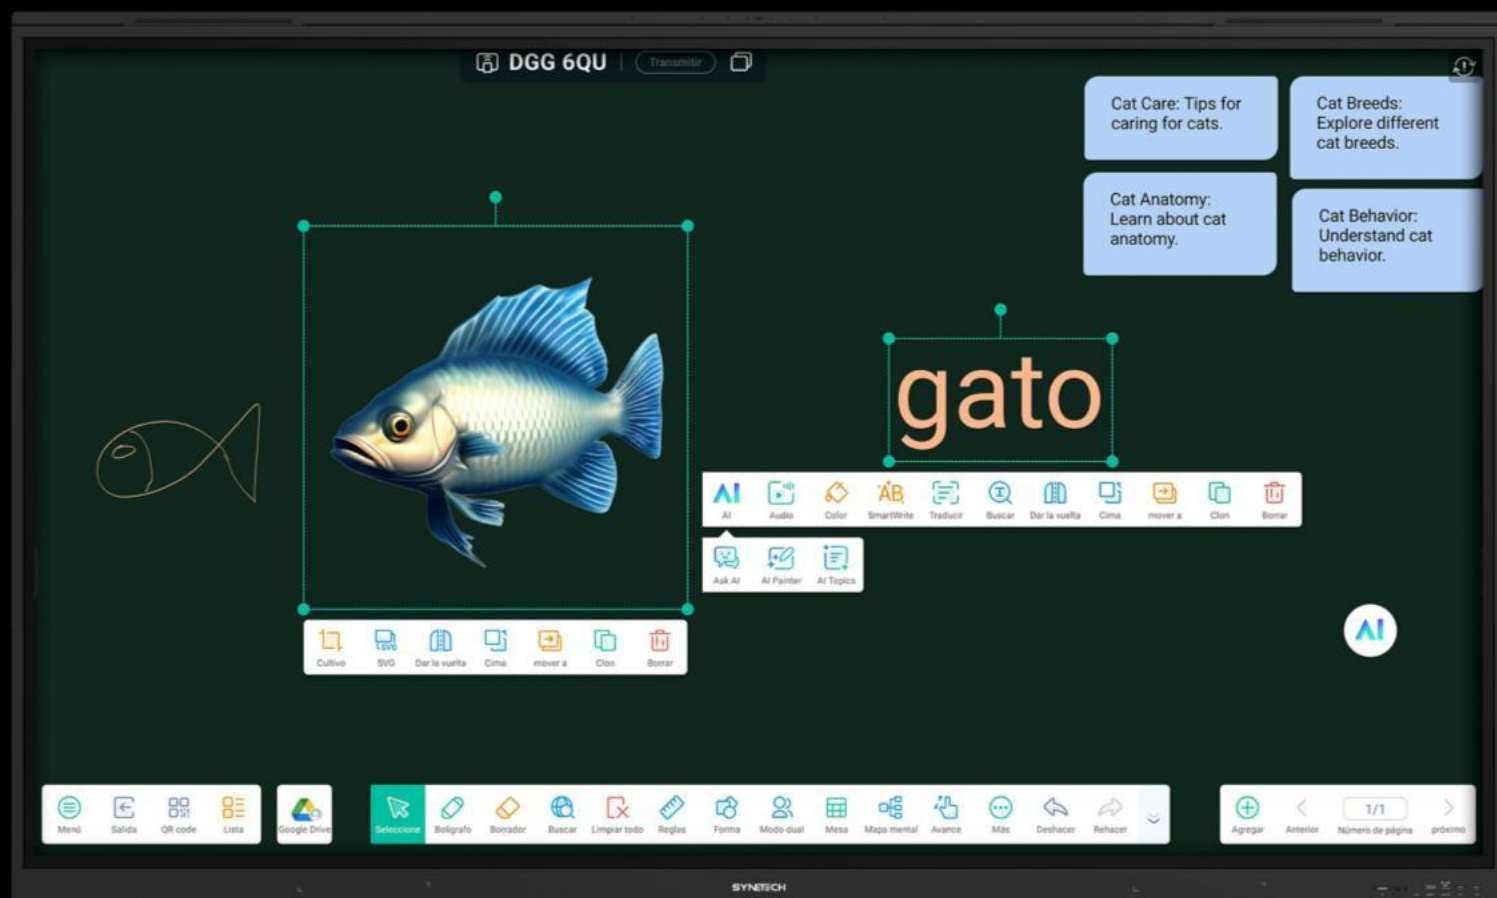

The art of AI

An artistic enhancer

Become an artist with generative AI. Transform a sketch into a work of art in seconds. This technology not only enriches teaching, but also fosters imagination and interactive learning.

In addition, AI automatically creates concept maps and receives topic recommendations from a single word.

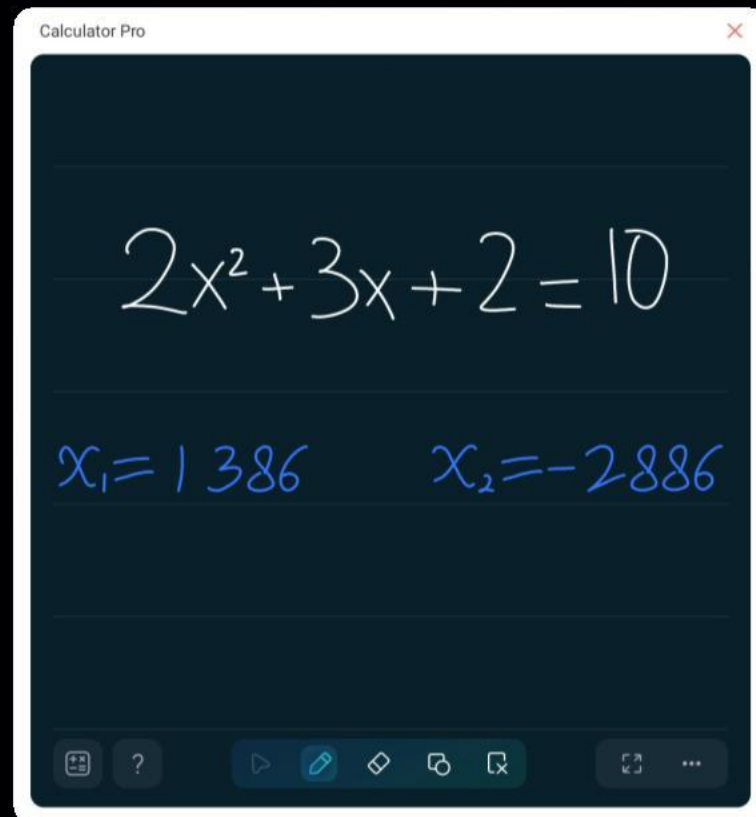

Calculator Pro

Advanced AI for mathematical calculations and graphics

The intelligent calculator transforms the way mathematical calculations are performed and geometric problems are solved. By typing mathematical operations directly into the on-screen calculator, the AI processes them and offers automatic solutions, even understanding the writing styles of each user.

Furthermore, the tool goes beyond basic calculations: it can generate graphs of mathematical functions to clearly visualize data, calculate the area of geometric figures, and even analyze relationships between variables to solve more complex problems.
